

15 MAY 1979

STAT
MEMORANDUM FOR: Chief, Plans and Program Staff, OL
FROM :
Chief, Real Estate & Construction
Division, OL
SUBJECT : Required 5% Reduction In Agency
Energy Use
REFERENCE : Memo dtd 1 May 1979 fm C/P&PS/OL to
C/RECD/OL

1. This memorandum addresses requirements contained in the referent whereby the President has directed all executive departments and agencies to reduce energy consumption by 5% for the twelve-month period beginning 1 April 1979 as compared to the preceding twelve months. In order to measure progress, it has been found that for the preceding twelve months the energy consumption has been as follows:

Fuel Oil for Boilers: 1,524,090 gallons

Total Electrical Consumption: 69,496,000 kW hour

2. It is understood that the automotive fuel question is being addressed by Logistics Services Division, OL, and as such is not mentioned here.

3. By tentative agreement and contingent on cooperation with GSA, this Agency will attempt to adjust requirements for steam and hot water that will enable the entire steam production and distribution systems from the powerplant to be secured for a period of time in late summer. It is believed that with the necessary installation of water heaters in strategic locations where process water of higher temperatures than ambient are required, the 5% savings can be achieved this year. When these same improvements are utilized early next summer for an even larger period, the potential savings should be even greater.
